Comsteel produces forged and rolled railway wheels to International Standards for all passenger wheel configurations. New materials for specific passenger applications have been developed by Comsteel, delivering improved performance and safety.

Forged and rolled wheels of widely varying shapes can be produced in sizes ranging from 650mm to 1250mm diameter. A modern C.A.D/C.A.M Q-Form system links design flexibility to manufacturing at the shop floor by generating tooling for forging and rolling and machining programs for the CNC Wheel machining centres. Sophisticated inspection techniques and accredited quality assurance systems ensure optimum product quality for our customers.
THE COMPLETE SUPPLY SOLUTIONS

Comsteel has the ability to supply direct to you anywhere in the world in batch sizes to suit your requirements.
